

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

- 1-4. (Canceled)
5. (Original) An internal combustion engine, comprising
an engine preheating apparatus which preheats the internal combustion engine upon or before starting thereof; and
an ignition timing controller which retards an ignition timing of the internal combustion engine that is preheated by the engine preheating apparatus as compared with the ignition timing of the internal combustion engine that is not preheated.
6. (Original) An internal combustion engine according to claim 5, wherein the ignition timing controller changes a degree of retarding the ignition timing according to a temperature of the internal combustion engine upon completion of preheating of the internal combustion engine.
7. (Original) An internal combustion engine according to claim 5, wherein the engine preheating apparatus comprises:
a heating medium flow path which is formed in the internal combustion engine and allows a heating medium to pass therethrough,
a heat accumulating apparatus which accumulates heat of the heating medium, and
a heating medium supplying apparatus which supplies the heating medium in the heat accumulating apparatus to the heating medium flow path upon or before starting of the internal combustion engine.
8. (Original) An internal combustion engine according to claim 5, further comprising an intake air amount controller which sets an intake air amount of the internal combustion engine that is preheated, to a value larger than the intake air amount of the internal combustion engine that is not preheated.
- 9 -17. (Canceled)
18. (Original) A method for controlling an internal combustion engine, comprising the steps of:
preheating the internal combustion engine upon or before starting thereof; and

retarding an ignition timing of the internal combustion engine that is preheated as compared with the ignition timing of the internal combustion engine that is not preheated.

19. (Original) A method according to claim 18, wherein a degree of retarding the ignition timing is changed according to a temperature of the internal combustion engine upon completion of preheating.

20. (Original) A method according to claim 18, wherein the step of preheating the internal combustion engine comprises:

introducing a heating medium into the internal combustion engine,
accumulating heat of the heating medium in a heat accumulating apparatus;

and

supplying the heating medium from the heat accumulating apparatus, to a heating medium flow path formed in the internal combustion engine, upon or before starting of the internal combustion engine.

21. (Original) A method according to claim 18, wherein an intake air amount of the internal combustion engine that is preheated is set to an amount larger than the intake air amount of the internal combustion engine that is not preheated.

22-26. (Canceled)
